Sample Questions for C9510-418:   IBM WebSphere Application Server v9.0 Network Deployment Core Server Administration

1. Which of the following is true about rolling back fix pack levels of the product?

A.   It is not possible to skip levels when applying maintenance.
B.   Only certain fix pack levels are supported when rolling back maintenance.
C.   Fix pack levels that are skipped cannot be the target of a rollback procedure.
D.   All maintenance includes all fix pack levels so any fix pack level can be rolled back to at any time.

2. After executing the command: `imcl listInstalledPackages,` an administrator sees the following result: `com.ibm.websphere.ND.v90_9.0.0.20160203_0234.`

What does this indicate to the administrator?

A.   IBM Installation Manager was installed.
B.   Installation Manager installed IBM WebSphere Application Server.
C.   The Profile Management Tool installed WebSphere Application Server.
D.   WebSphere Customization Toolbox installed WebSphere Application Server.

3. A configuration checkpoint could not be restored and could only be viewed.

What could be the reason?

A.   File system permissions have prevented restoration.
B.   The user ID being used was configured as an Operator.
C.   The antivirus software on the system prevents restoration.
D.   Configuration checkpoint has been corrupted on the file system.

4. If an administrator sets the regenerate time for high availability plug-in generation to 10, what is the effect?

A.   The `plugin-cfg` file is generated exactly every 10 minutes.
B.   The `plugin-cfg` file is generated at most every 10 minutes.
C.   The `plugin-cfg` file is generated 10 minutes after a rebuild request.
D.   The `plugin-cfg` file is generated after doing a poll every 10 minutes.

5. Which attribute can be configured in a security domain?

A.   Audit
B.   User realm
C.   Single sign-on
D.   LTPA authentication mechanism

6. Which tool can be used to get dynamic cache size details and monitoring and tuning suggestions?

A. Request metrics
B. Performance servlet
C. Performance and Diagnostic Advisor
D. IBM Tivoli Performance Viewer advisor

7. How would an administrator configure Cross Component Trace?

A. Through `wsadmin` script only
B. Through the Integrated Solutions Console only
C. Through the supplied Cross Component Trace enablement tool
D. Through either the Integrated Solutions Console or through `wsadmin` script

8. Which of the following could be diagnosed using one of the Diagnostic tools in the IBM Support Assistant?

A. Port conflicts
B. Capacity problems
C. Network performance problems
D. Operating system prerequisites

9. Which task must be completed before using the Job Manager?

A. Create an administrative agent for all the nodes in the cell.
B. Ensure that the profiles in the environment all have security enabled
C. Federate any stand-alone nodes to the deployment manager in the cell.
D. Create a Job Manager profile and a profile for each target node that needs to be managed.

10. When configuring a dynamic cluster, which option can improve bottleneck conditions in deployed applications by enabling the placement controller to start more than one instance of the dynamic cluster on a node?

A. Automatic mode
B. Vertical stacking
C. Number of server instances
D. Custom dynamic server template

11. Which step must be completed when placing an application edition in validation mode?

A. Roll out the new edition.
B. Stop the currently active edition.

C. Create routing policies for the new edition.
D. Verify that three cluster members are used in the task.

12. Which components and services are available in a standalone environment?

A. JCA services, web services engine, and security
B. High availability, EJB container, and performance infrastructure
C. Caching proxy, administrative infrastructure, and extensions registry
D. Workload management, messaging engine, and web services engine

Answer Key
1. C
2. B
3. B
4. B
5. B
6. D
7. D
8. A
9. D
10. B
11. C
12. A
